

BEST

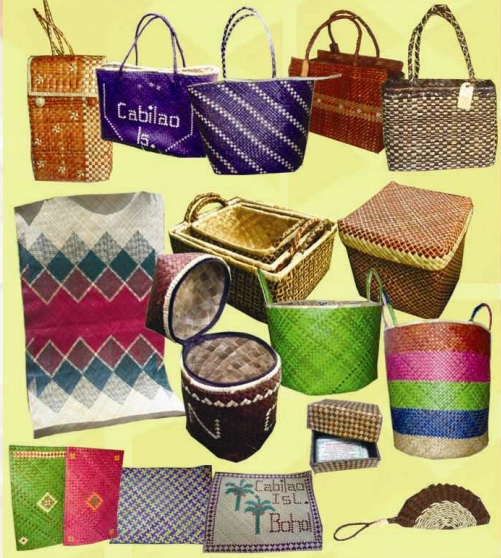

of Bohol

The Bridging Enterprises for Sustainable Tourism (BEST) of Bohol Project is primarily designed to reduce poverty incidence in three of the six FOCAS 1 municipalities, particularly Catigbian, Loon and Maribojoc by transforming subsistence agribusinesses into vibrant enterprises with the capacity to train and employ the poorest people willing to work in the barangays. It builds on the momentum of the eco-tourism development efforts already underway in the three municipalities by creating the market linkages, product design expertise and business administration support structures required to deliver high quality, handcrafted products from locally grown materials.
